DataBoss Case Study

Loss F1 and Accuracy scores of the five best cases during training and validating.

Adnan Harun Doğan

All of the models whose scores are seen below have the following common hyperparameters.

- convolution kernel size = 3
- pooling kernel size = 3
- pooling stride = 3
- pooling method = "Avg"
- residual connections = True
- batch normalizations = True
- weight decay = 0.00004
- batch size = 1000
- learning rate $\approx 7e-6$
